Combat Casualty Care: Lessons Learned from OEF and OIF (2012)

— This book is designed to deliver combat casualty care information that will facilitate transition from a CONUS or civilian practice to the combat care environment. Establishment of the Joint Theater Trauma System (JTTS) and the Joint Theater Trauma Registry (JTTR), coupled with the efforts of the authors, has resulted in the creation of the most comprehensive, evidence-based depiction of the latest advances in combat casualty care. Lessons learned in Operation Enduring Freedom (OEF) and in Operation Iraqi Freedom (OIF) have been fortified with evidence-based recommendations with the intent of improving casualty care. The chapters specifically discuss the differences between combat casualty care and civilian sector care, particularly in the scheme of “echelonized” care. Overall, the educational curriculum was designed to address the leading causes of preventable death and disability in OEF and OIF. Specifically, the generalist CCC provider is presented requisite information for optimal care of US combat casualties in the first 72 to 96 hours after injury. The specialist combat casualty care provider is afforded similar information, which is supplemented by lessons learned for definitive care of host nation patients. This information provides an excellent supplement to pre-deployment CCC training and education.

TeamSTEDPS/Dt Safety Issues

BY: TIMOTHY BRUSH

We’re published!! — *Measurement and Training in Team-STEPPS Dimensions Using the Medical Team Performance Assessment Tool*, is the title of a joint article published in The Joint Commission Journal on Quality and Patient Safety (February 2013).

The MTPAT is a software application that provides capabilities to support evaluation, debrief, and analysis of healthcare team performance in training and operational environments

The MTPAT is free for use within the US federal government and available for download. For more information please contact patientsafety@tma.osd.mil.
