Site Name: Fire Training Area #2

Site Description: Fire Training Area #2 is located in the northeastern part of the North/East/West Industrial Operable Unit (NEWIOU). Waste fuel, oil and solvents were burned at the site during fire training exercises conducted from 1950 to 1952.

Selected Remedy: The NEWIOU Soil, Sediment and Surface Water ROD (URS, 2006) selected Alternative 18 (Excavation) to address the contaminated soil at this site. In the summer of 2007, Travis AFB carried out a soil cleanup action at FT003. All of the contaminated soil was excavated and placed in a Corrective Action Management Unit (CAMU), located at site LF007. The soil cleanup action achieved residential cleanup levels for all chemicals of concern, so there are no Land Use Controls in place at the site. The results of the soil cleanup action are presented in a 2008 remedial action completion report for multiple sites. Since there are no other media of concern associated with Fire Training Area #2, the site is closed.
