

Travis Air Force Base Environmental Restoration Program

Site LF006

September 2020

Site Name: Landfill #1

Site Description: LF006 is a former waste disposal landfill in the northeastern portion of Travis AFB that was operated from about 1943 through 1950. The waste contained chlorinated solvents, mainly trichloroethene (TCE), and petroleum fuel hydrocarbons that contaminated the local groundwater.

The list of chlorinated COCs for LF006 groundwater includes TCE and 1,1-dichloroethene (DCE).

Selected Remedy: The Travis AFB Groundwater ROD (CH2M HILL, 2014) selected Alternative 2 (Monitored Natural Attenuation) to address the residual dissolved solvent contamination.
