

Travis Air Force Base Environmental Restoration Program

SD001

September 2020

Site Name: Storm Sewer System A and C, Union Creek

Site Description: Site SD001 consists of the main branch of Union Creek and the associated Storm Sewer Systems A & C. The main branch of Union Creek runs parallel to the southern portion of the base runway. Union Creek is not a source of contamination but has received contaminated groundwater or storm sewer contaminants from upstream sources.

Selected Remedy: In the summer of 2009, Travis AFB carried out a sediment cleanup action at SD001. The base excavated the contaminated sediment and transported it to an off-base landfill. The excavation was conducted to minimize impacts on the existing habitat. The sediment cleanup action achieved residential cleanup levels for all chemicals of concern, so there are no Land Use Controls in place at the site. The results of the sediment cleanup action are presented in the SD001/SD033 remedial action completion report. Since there are no other media of concern associated with the main branch of Union Creek, Site SD001 is closed.
