## Travis Air Force Base Environmental Restoration Program

---

---

Site SD031

---

---

September 2020

---

Site Name: Facility 1205

**Site Description:** SD031 is a concrete and asphalt industrial area that is used by the Civil Engineer Maintenance Inspection and Repair Team (CEMIRT). Site SD031 covers approximately 5.5 acres and encompasses Facility 1205 in the north-eastern part of the EIOU. Facility 1205 was constructed in 1957, and operations included the maintenance and repair of diesel-powered generators.

The list of chlorinated COCs for SD031 groundwater includes TCE, benzene, 1,1-DCE, cis-1,2-DCE, carbon tetrachloride, chloroform, 1,2-DCA, and vinyl chloride. An upcoming Remedial Investigation will identify the soil COCs at this site.

**Selected Remedy:** The Travis AFB Groundwater ROD (CH2M HILL, 2014) selected Alternative 2 (Monitored Natural Attenuation) to address the residual dissolved solvent contamination.
