

Travis Air Force Base Environmental Restoration Program

SD042

September 2020

Site Name: Buildings 929/931/940

Site Description: Building 929 is a storage shed, building 931 is a maintenance facility for portable electric generators, and building 940 was a former paint-drying facility. The ditch adjacent to these buildings received metals and SVOC contaminants from past industrial activities.

Selected Remedy: The West/Annexes/Basewide Operable Unit Soil ROD (CH2M HILL, 2002) selected Alternative S6 (Excavation/On-base Consolidation) to clean up the contaminated soil at this site. The base conducted a soil remedial action that achieved residential cleanup levels and made the site suitable for unlimited use and unrestricted exposure. The Site Closure Report for SD042 documented the successful completion of all remediation action at Site SD042 and closed the site.
